

# Komodo Edit

---

Komodo Edit is a text editor that allows you to create HTML, CSS, PHP, and JavaScript files. You can save files directly to the server, and open files from the server.

## Download Komodo Edit

To download Komodo Edit, visit <http://komodoide.com/download/> and then click the Komodo Edit menu option.

The screenshot shows the Komodo IDE website's download page. At the top, there is a dark blue navigation bar with the Komodo IDE logo and the text 'by ActiveState' on the left, and 'HOME', 'FEATURES', and 'PACKAGES' on the right. Below the navigation bar, the main heading is 'Download Komodo'. Underneath, there are four links: 'Komodo IDE', 'Komodo Edit' (which is circled in red), 'Pre-Release (IDE)', and 'Pre-Release (Edit)'. Below these links, there is a paragraph of text: 'By downloading Komodo Edit, you comply with the terms of use of the [ActiveState Komodo Edit License](#). Please refer to [our documentation](#) for install/uninstall instructions.' Below this paragraph, it says 'Komodo Edit is entirely **Open-Source**, be sure to check out [our GitHub page!](#)'. There are three large buttons for downloading: 'Download Komodo Edit For OSX (x86\_64)' (blue), 'Download For Windows (x86)' (dark grey), and 'Download For Linux (x86\_64)' (dark grey). Below these buttons, there is a link for 'Download For Linux (x86)' (dark grey) and a link for 'System Requirements' (blue).

Select the appropriate version for download.

## Install and Launch Komodo Edit

Install Komodo Edit from the download, and then launch the program.

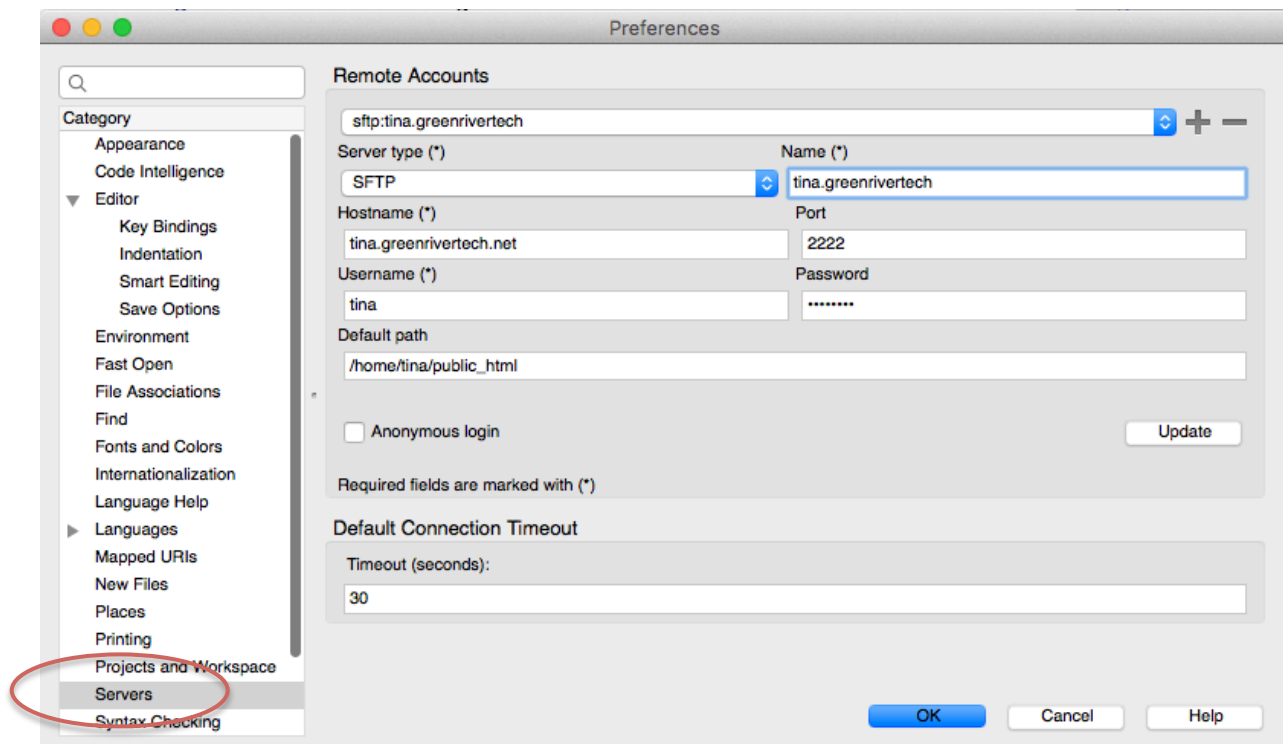

## Connect to your Site

Select Edit → Preferences on a PC or Apple key → Preferences on a Mac.

Click Servers in the left hand category list.

Enter the following fields:

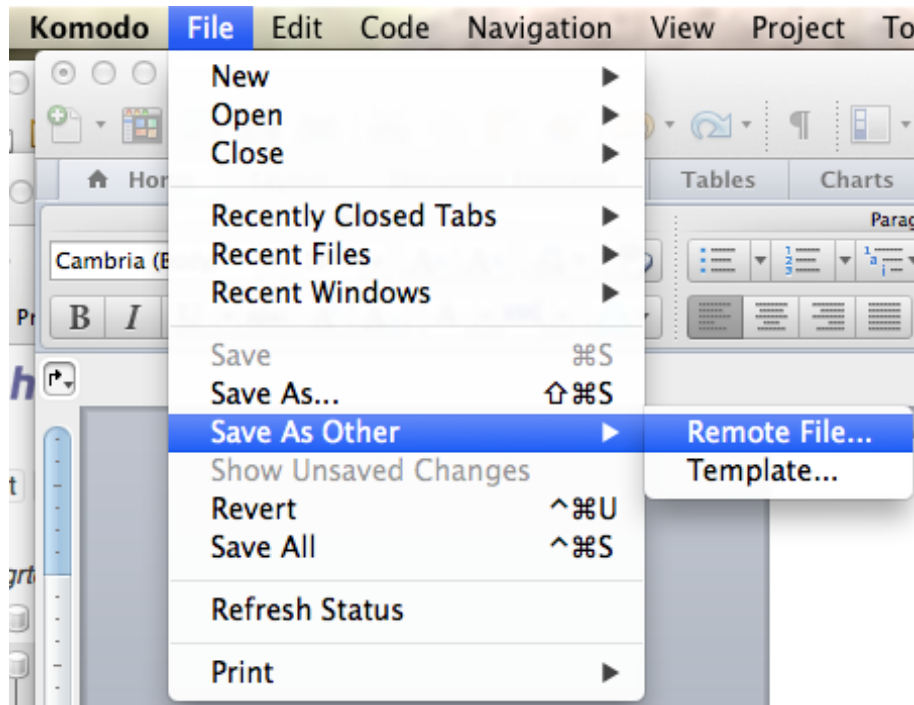

- Server type: SFTP
- Name: Whatever you want, preferably something meaningful
- Hostname: *username.greenrivertech.net*
- Port: 2222
- Username: Your username
- Password: If you are on your home machine, enter your password here. If you are on a campus machine, leave it blank.
- Default path: */home/username/public\_html*

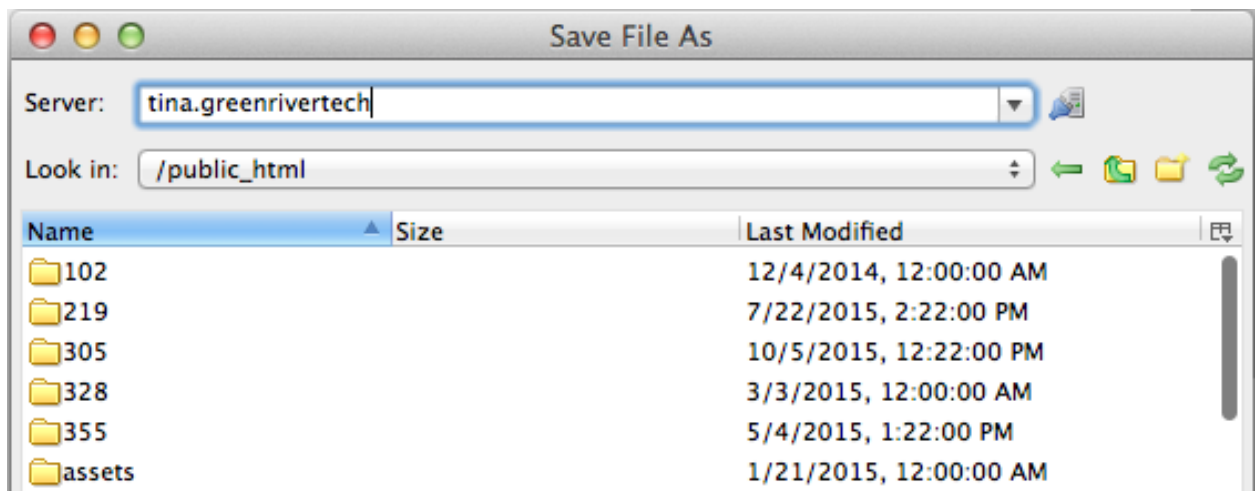

Click OK.

## Save a File

To save a file to the server, select File → Save as Other... → Remote File

Select your server name from the dropdown list.

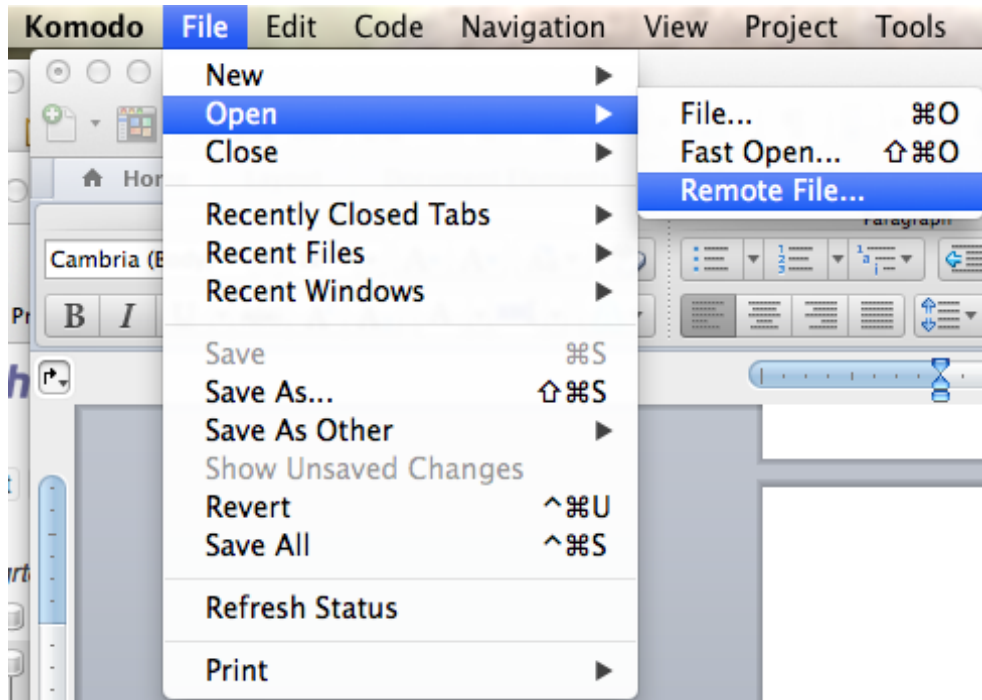

Select the folder you want to save to, and then give the file a name. Click OK.

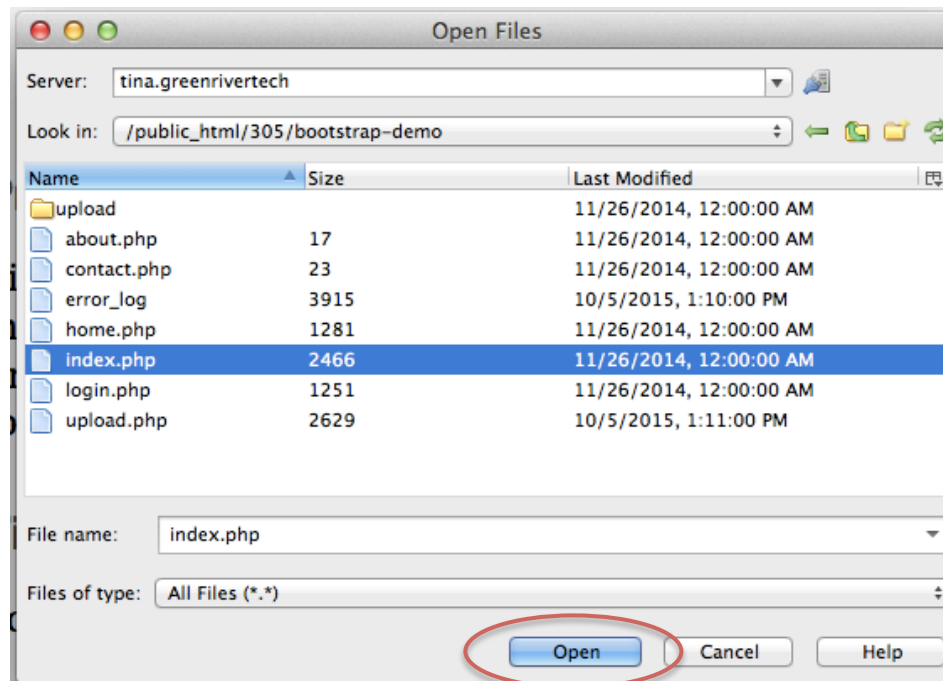

Once you've saved a file to the server, you can save any future changes by typing Ctrl-S or by clicking the Save icon.

## Open a File

To open a file from the server, choose File → Open → Remote file

Choose your server name from the dropdown list, then navigate to your file. Either double-click it or click Open.

If you've opened a file from the server, then you can save any changes to that file by typing Ctrl-S or by clicking the Save icon.
